Definitions:

Price/Earnings (P/E) excluding negative earnings per share is the price of a share of a stock divided by earnings per share, usually calculated using the latest year's earnings. Stocks with negative earnings per share are excluded from the calculation.

Price/Book (P/B) is the ratio used to compare a stock's market value with its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share.

Median Market Cap is the midpoint of market capitalization (market price multiplied by the number of shares outstanding) of the stocks in a portfolio. Half the stocks in the portfolio will have higher market capitalizations; half will have lower.

5-year earnings growth rate of a fund is the weighted median of the annualized rate of earnings-per-share growth over the trailing five-year period for the stocks held within a fund.

Risks:

Stock values fluctuate in response to the activities of individual companies and general market and economic conditions. Certain investment strategies tend to increase the total risk of an investment (relative to the broader market). This fund is exposed to foreign investment risk and smaller-company securities risk.
