

# Global Equity Enhanced Income Fund

## OBJECTIVES AND PROCESS

- Seeks a high level of current income and long-term capital appreciation by investing primarily in equity securities of any market cap and style, broadly diversified among major economic sectors and global geographic regions
- Under normal conditions, the fund invests:
  - At least 90% of its total assets in equity securities of companies located worldwide of which at least 90% will be invested in dividend-paying equity securities
  - In equity securities of issuers located in at least five different countries, including the U.S., and maintains an allocation to U.S. securities within 10% of the fund's U.S. benchmark allocation
- Targets an overall carbon footprint and carbon intensity for the portfolio that is at least 30% lower than the MSCI All Country World Index
- Targets creating a portfolio with a higher weighted average ESG score than the MSCI All Country World Index
- Uses a proprietary fundamental investment process to identify quality companies around the world with a proven track record of delivering consistent or rising dividends and companies likely to raise their dividends meaningfully and/or to pay a significant special dividend
- Employs a strategy of writing (selling) call options – with a net notional amount of up to 100% of total assets in an attempt to generate premium income
- Seeks to provide a targeted yield for the fund based on prevailing market conditions, although there is no guarantee that the fund will generate the targeted yield, or any other level of income or returns
- May use currency exchange transactions for hedging and other derivatives for hedging, efficient portfolio management or investment purposes

## KEY RISKS

**Market risk:** securities may decline in value due to factors affecting securities markets generally, and equity securities generally have greater price volatility than debt securities. **Smaller-company security risk:** securities of companies with smaller market capitalisations tend to be more volatile and less liquid than securities of larger companies. **Geographic concentration risk:** investments concentrated in specific geographic regions and markets may be subject to greater volatility due to economic downturns and other factors affecting the specific geographic regions. **Global investment risk:** securities of certain jurisdictions may experience more rapid and extreme changes in value and may be affected by uncertainties such as international political developments, currency fluctuations and other developments in the laws and regulations of countries in which an investment may be made. **Derivatives risk:** the use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. The use of derivatives can lead to losses because of adverse movements in the price or value of the underlying asset, index or rate, which may be magnified by certain features of the derivatives. **ESG risk:** applying an ESG screen for security selection may result in lost opportunity in a security or industry resulting in possible underperformance relative to peers. ESG screens are dependent on third-party data and errors in the data may result in the incorrect inclusion or exclusion of a security.
