| <b>Objectives</b>             | <p>Allspring (Lux) Worldwide Fund - Climate Transition Global Equity Fund (the "Sub-Fund") seeks long-term capital appreciation. The Sub-Fund promotes environmental and/or social characteristics but does not have a sustainable investment objective. The Sub-Fund invests at least two-thirds of its net assets in equity securities of companies located worldwide. Under normal market conditions, the Sub-Fund invests in equity securities of issuers located in at least five different countries, including the U.S. The Sub-Fund may also invest up to 20% of its net assets in equity securities through ADRs, CDRs, EDRs, GDRs, IDRs and similar depository receipts as well as equities denominated in US Dollars issued by Non-US Issuers. In terms of environmental characteristics, the Sub-Investment Manager will use a combination of data from providers that specialise in climate data and internal analysis to construct a portfolio of global companies that the Sub-Investment Manager believes are well positioned for a transition to a decarbonised economy by investing in companies within the MSCI All Country World Index identified as being aligned with an average global temperature increase of 2 degrees Celsius or less. The Sub-Investment Manager will target to decarbonise the Sub-Fund by 2050. This is intended to be achieved by initially setting a cap on the weighted average carbon intensity for the Sub-Fund that is lower than that of the MSCI All Country World Index. The cap will reduce along a trajectory that will decline in order to decarbonise the Sub-Fund by 2050.</p> <p>The Sub-Fund may also use futures, forward contracts, options, or swap agreements, as well as other derivatives, for hedging or efficient portfolio management purposes.</p> <p>Through the use of a negative screening process, the Sub-Fund seeks to exclude securities in accordance with its exclusion policy. A copy of the methodology and list of excluded investments (including the revenue thresholds) is available under <a href="https://allspringglobal.com">allspringglobal.com</a>. Shareholders may also request a copy from the Fund or the Management Company. The Sub-Investment Manager then employs a "quantamental" investment approach to the list of companies identified as being aligned with an average global temperature increase of 2 degrees Celsius or less, utilising a combination of quantitative methods and fundamental analysis to identify companies based on valuation, quality and momentum characteristics that give a comprehensive view of each company's relative valuation, operational and financial performance, and stock price behaviour. The Sub-Investment Manager's approach seeks to achieve positive excess returns relative to the MSCI All Country World Index by using stock selection to take controlled active risks in the portfolio including sector and regional relative weights. The Sub-Fund is actively managed but uses the MSCI All Country World Index as a reference for selecting investments and for performance comparison. The investments of the Sub-Fund may deviate significantly from the components of and their respective weightings in the benchmark.</p> <p>You may redeem your investment upon demand on each business day when banks in Luxembourg are open for normal business and the New York Stock Exchange is open for trading (a "Business Day").</p> <p>This share class does not distribute dividends. Income is reinvested in the Sub-Fund.</p> <p>This share class will seek to be 100% hedged against the base currency of the Sub-Fund with the objective of minimising currency risk exposure. It may not be possible to always hedge the class 100% against fluctuations of the reference currency.</p> |

## What are the risks and what could I get in return?

### Summary risk indicator

The risk indicator assumes you keep the product for 5 years.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level; and poor market conditions are very unlikely to impact the capacity of the Sub-Fund to pay you.

**Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.**

### Performance scenarios

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted. The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the product / a suitable benchmark over the last 10 years. The scenarios shown are illustrations based on results from the past and on certain assumptions. Markets could develop very differently in the future.

### What happens if Allspring Global Investments Luxembourg S.A. is unable to pay out?

The value of your investment would not be affected by a default by the PRIIP Manufacturer. The value of your investment is not guaranteed but you will not face financial loss greater than the amount of your investment.

### What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

## Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods. We have assumed: in 2026 you would get back the amount that you invested (0% annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario.

| Investment NOK 10,000 |                          |                           |
|-----------------------|--------------------------|---------------------------|
| Scenarios             | If you exit after 1 year | If you exit after 5 years |
| Total costs           | 85 NOK                   | 786 NOK                   |
| Annual cost impact(*) | 0.9%                     | 1.0%                      |

(\*) This illustrates how costs reduce your return each year over the holding period. For example, it shows that if you exit at maturity your average return per year is projected to be 13.6% before costs and 12.7% after costs.
