

Emerging Markets Equity Fund

OBJECTIVES AND PROCESS

- Seeks long-term capital appreciation.
- Invests at least 80% of its assets in equity securities of companies tied economically to emerging market countries (as defined by the MSCI Emerging Markets Index), either directly in equity securities or indirectly (for example, notes and convertibles).
- Uses a bottom-up selection process to identify quality companies at prices below their intrinsic value.
- Uses a negative screen to exclude securities issued by companies based on their exposure to ESG risks.
- The fund may invest:
 - in companies that it has determined either have strong current performance on ESG issues tied to long term value creation or improvement catalysts in place demonstrating that they are on track to meet improvement expectations around ESG issues tied to long term value creation
 - in stocks across all capitalisations and styles, diversified across countries and sectors
 - in assets denominated in any currency
 - an aggregate of up to 50% of fund assets both directly and indirectly in China A-shares
 - by using futures/derivatives for hedging or efficient portfolio management purposes
- The fund expects to maintain an allocation to China within 15 percentage points of the allocation of the MSCI Emerging Markets Index.

KEY RISKS

Market risk: securities may decline in value due to factors affecting securities markets generally, and equity securities generally have greater price volatility than debt securities.

Smaller company securities risk: securities of companies with smaller market capitalisations tend to be more volatile and less liquid than securities of larger companies. **Emerging**

market risk: emerging markets may be more sensitive than more mature markets to a variety of economic factors and may be less liquid than markets in the developed world. **ESG risk:**

applying an ESG screen for security selection may result in lost opportunity in a security or industry resulting in possible underperformance relative to peers, ESG screens are dependent on third party data and errors in the data may result in the incorrect inclusion or exclusion of a security.
